#### **DETAILED ACTION**

1. Claims 1 and 57-75 are pending and have been examined. This Office Action is directed towards the Applicant's response filed

### **Response to Arguments**

2. Applicant's arguments with respect to claims 1 and 57-75 have been considered but are most in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1, 57-61, 63-71, 73, and 74 are rejected under 35 U.S.C. 103(a) as being unpatentable over Williams et al., US 5,815,657, and Donner et al., European Patent Application, Publication Number: 0 512 702 A2, Published on November 11, 1992.

As for claim 1, Williams et al. teaches a method of managing reliance in an electronic transaction system (Abstract) the method comprising: obtaining electronic signals representing subscriber assurance of an attribute of a subscriber to the system

•

Art Unit: 2137

(fig. 29), the subscriber assurance issued by a certification authority (fig. 30, col. 11 lines 30-37, col. 36 lines 63-67, col. 37 lines 1-12); obtaining electronic signals representing a request for transactional assurance based on at least the subscriber assurance based on a transaction involving the subscriber (col. 13 line 40 through col. 14 line 23: the Payment Manager receives the request for transactional assurance (i.e., authorization to pay or payment) from the merchant, and receives certificate information from the user (user's wallet manager)); determining whether to provide the requested transactional assurance, based on at least the subscriber assurance (col. 13 line 40 through col. 14 line 23: the Payment Manager receives the request for transactional assurance (i.e., authorization to pay or payment) from the merchant, and receives certificate information from the user (user's wallet manager)); and, depending on the said determining, issuing electronic signals representing transactional assurance to the relying party (fig. 34: Payment Window). Williams fails to teach a transactional financial assurance that is not a payment request or a payment authorization of the transaction itself. However, Donner does teach this step (Abstract, page 2 lines 55-58, page 3 lines 9-13). Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate this step into the system of Williams. It would be desirable to do so as such an assurance prevents extraneous payment authorization or payment requests from being transmitted.

As for claim 57, Williams teaches the method of claim 1, wherein the subscriber assurance comprises (a) an identification assurance of the identity of the subscriber, or

(b) an authorization assurance of authorization of the subscriber, or (c) both (a) and (b) (col. 13 line 41 through col. 14 line 6: Payment Manager receives a user certificate containing I.D. information).

As for claim 58, Williams teaches the method of claim 1, wherein the subscriber assurance comprises electronic signals representing a certificate (col. 13 line 41 through col. 14 line 6: Payment Manager receives a user certificate containing I.D. information).

As for claim 59, Williams teaches the method of claim 1, wherein the determining is based also on information provided by the relying party (col. 13 line 41 through col. 14 line 6: Payment Manager receives a user certificate containing I.D. information and certificate information from the Merchant).

As for claim 60, Williams teaches the method of claim 1, wherein the request for transactional assurance comes from the relying party (col. 13 lines 40-53: Merchant payment request also contains financial assurance information such as the merchant certificate sent to the payment manager).

As for claim 61, Williams teaches the method of claim 1, wherein the request for transactional assurance includes a request for a guarantee of an aspect of the transaction and comprising (col. 13 lines 40-50: Merchant sends transaction details and

Art Unit: 2137

his certificate): validating information in the request for transaction financial assurance to determine whether to provide the guarantee for the aspect of the transaction (col. 16 lines 19-25: Merchant is verified); and sending electronic signals representing an indication of whether the aspect of the transaction will be guaranteed (col. 16 lines 19-25: a message is sent as to whether Merchant is verified or not, and therefore whether payment will be made of not).

Claims 63-71, 73 and 74 are directed towards a computer program that directs a computer to carry out the method steps of claims 1 and 57-61. Claims 63-75 contain substantially the same limitations as claims 1 and 57-62. Therefore claims 63-75 are rejected on the same basis as claims 1 and 57-61.

#### Allowable Subject Matter

5. Claims 62, 72, and 75 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul E. Callahan whose telephone number is (571) 272-3869. The examiner can normally be reached on M-F from 9 to 5.

Application/Control Number: 09/943,086

Art Unit: 2137

If attempts to reach the examiner by telephone are unsuccessful, the Examiner's
